Report Document

Prepared by

V.Pardhu Vineeth - 120015109

V.Bhargav - 120015110

Problem Statement

- In our college there is no correct source which provides required reference books and previous question papers .
- So every semester the students are waiting for the lecturers to share the required materials.
- Also the students are not having uniform materials(i.e. different editions of same book).
- Some students may not be aware of various events, workshops, seminars happening in our college which might be useful to them.

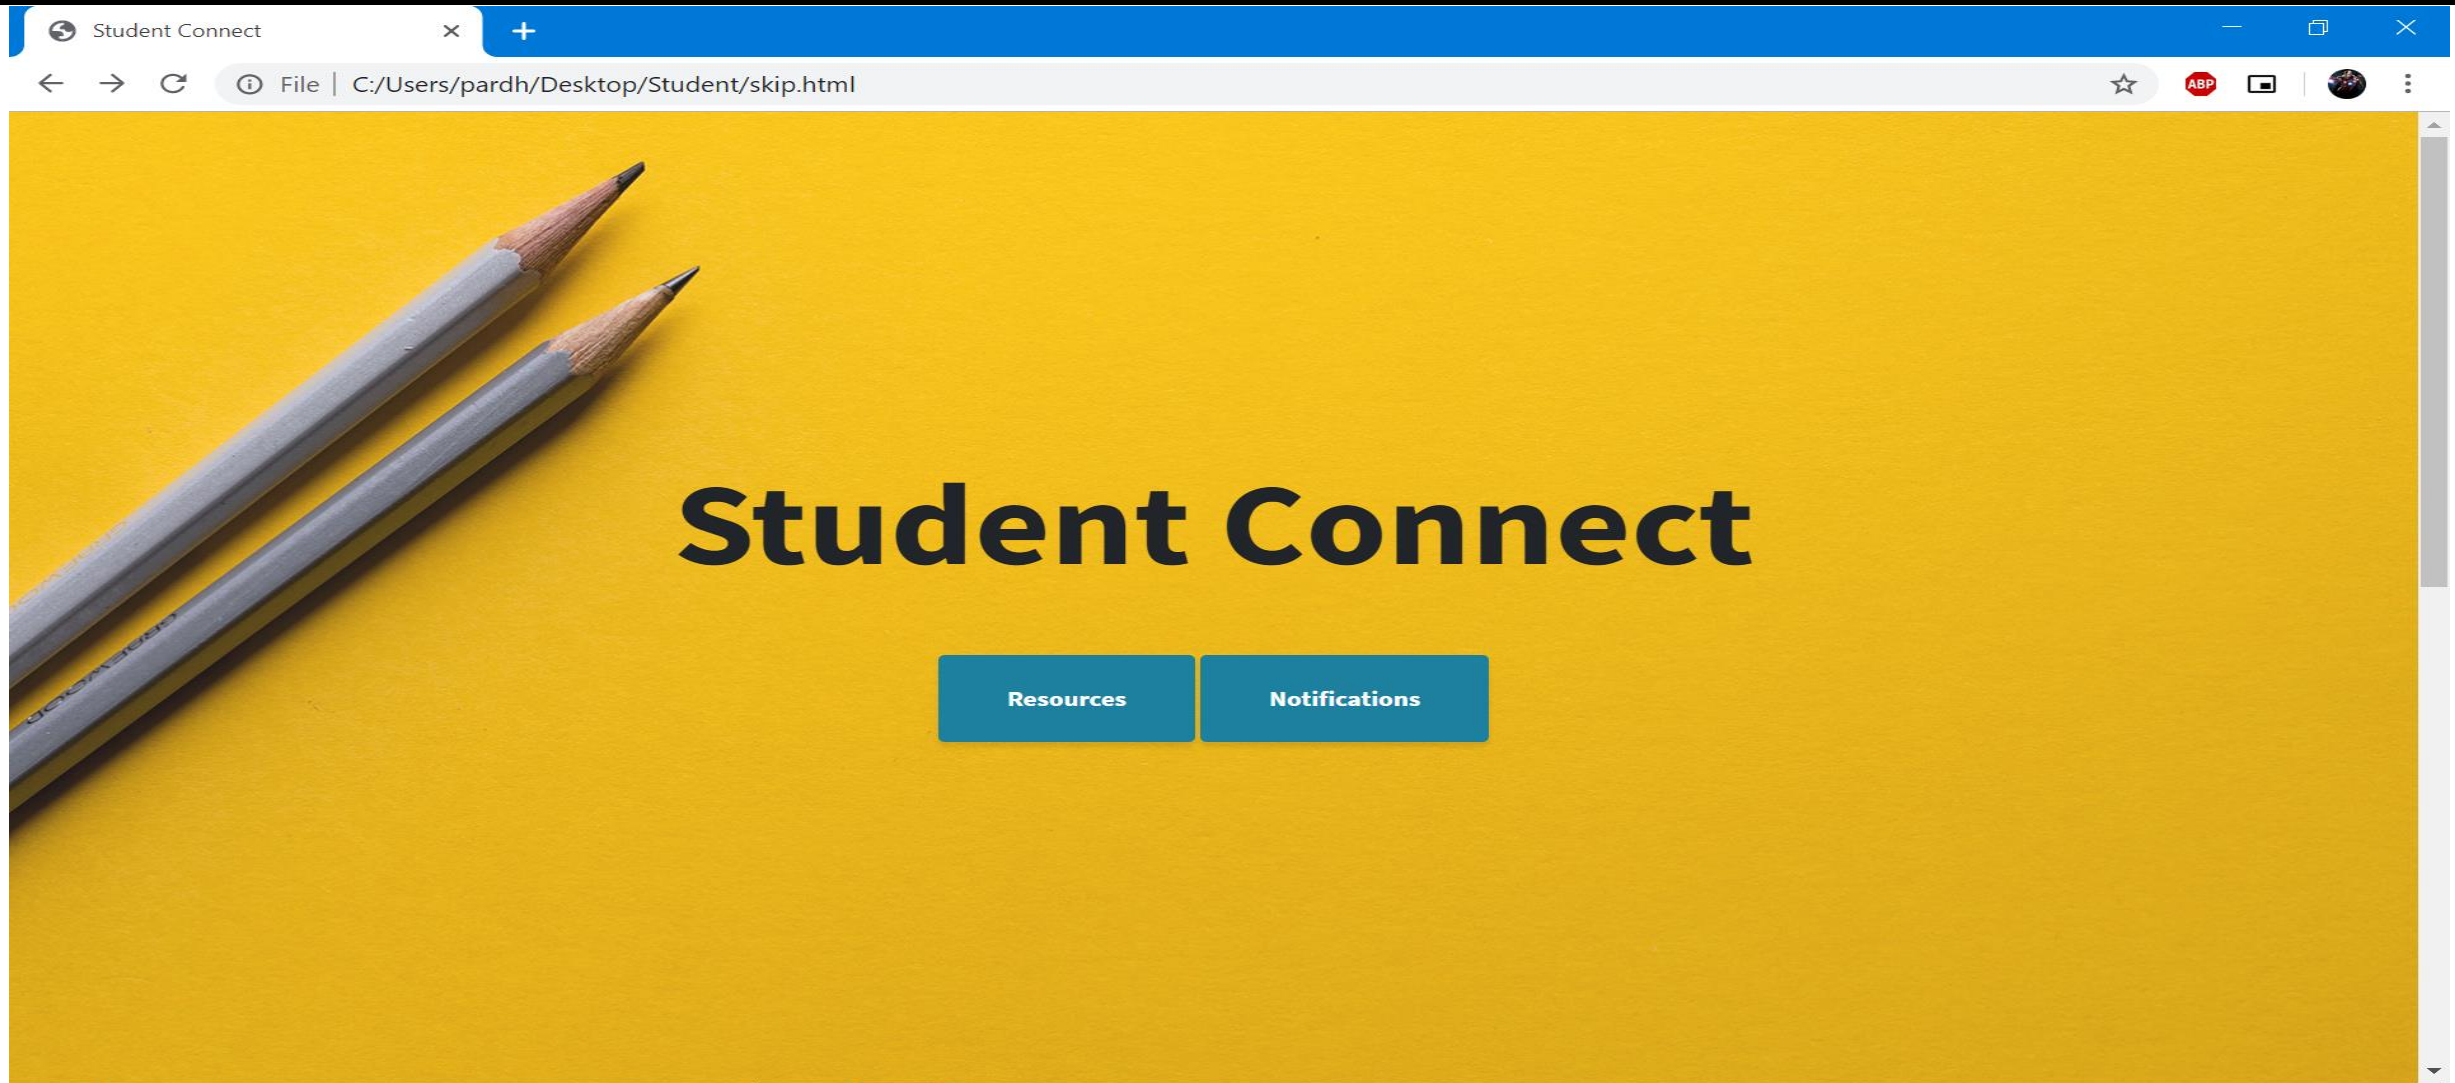

Solution to the Problem

- The solution to the problem is to create a web page where every student can get updated textbooks, information about various companies which are visiting our SASTRA and their criterias.
- Also they will get information about various events, seminars, workshops which are taking place in our college.
- They can also get the previous year Question Papers of all branches and years.
- They will be provided links for downloading all prescribed textbooks and reference textbooks.

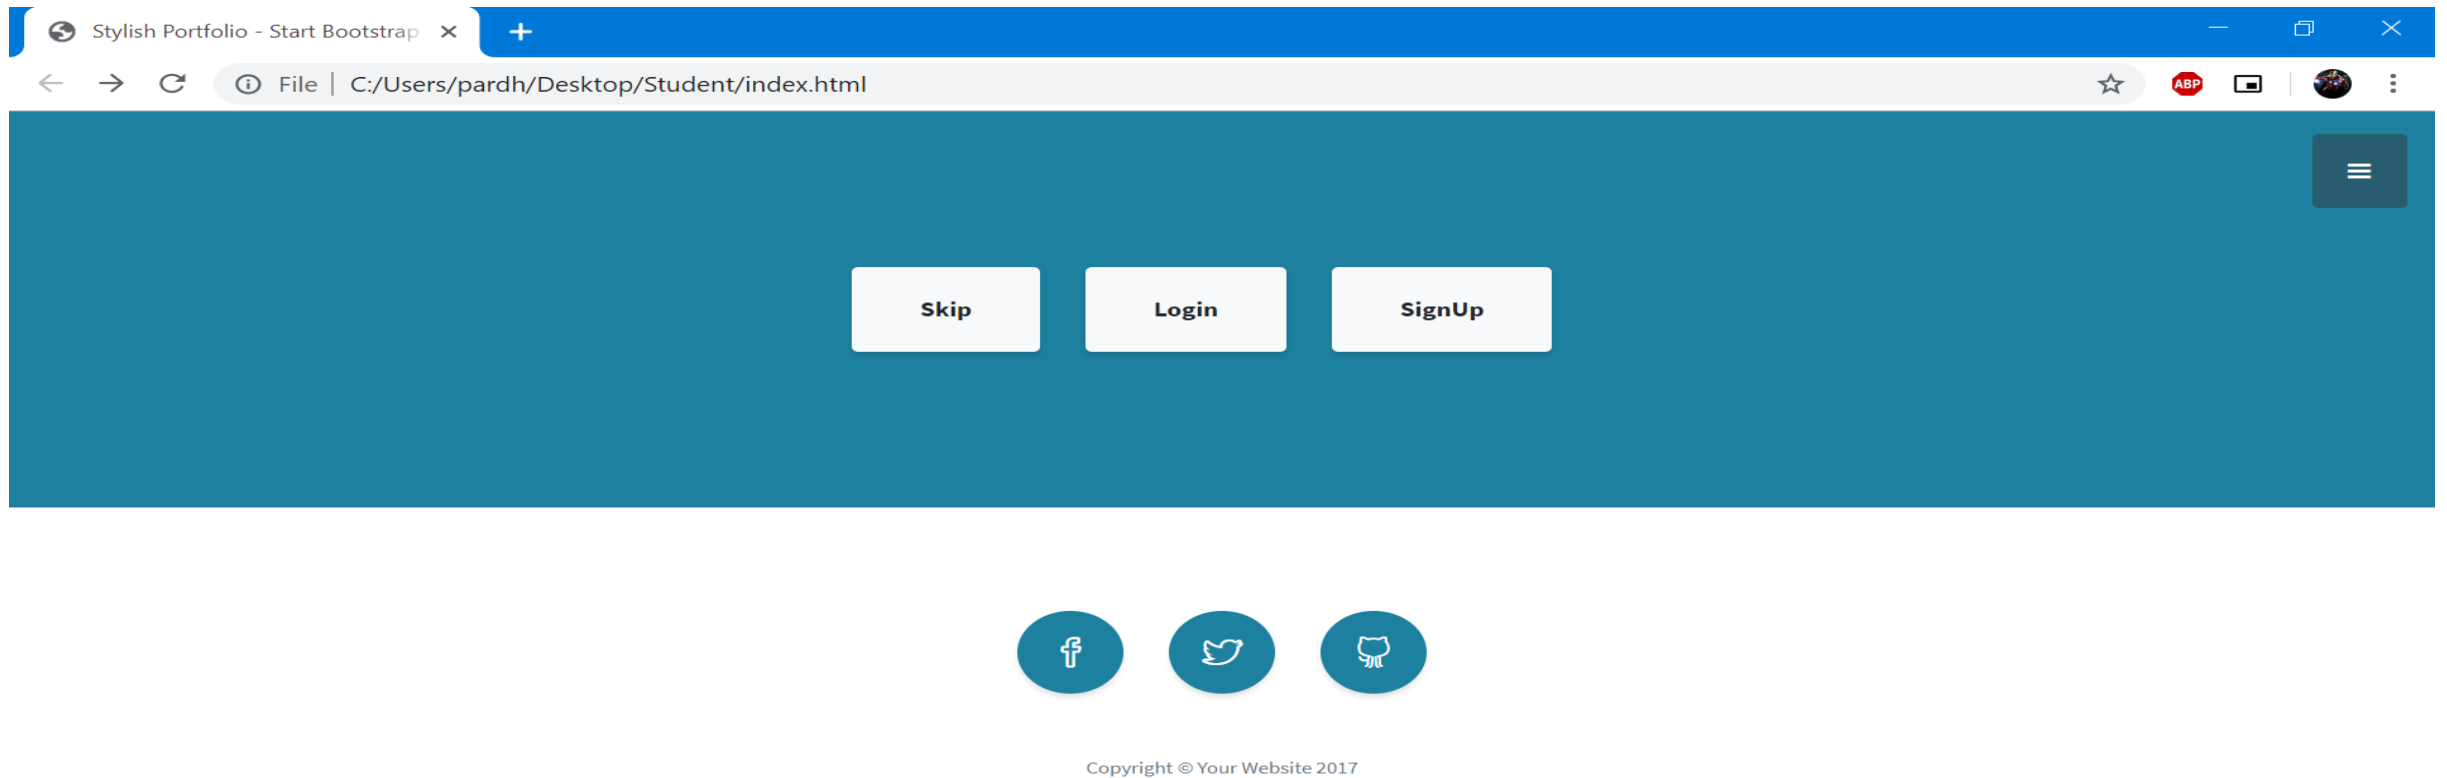

BENEFITS OF SOLUTION

- Students can download textbooks easily
- They will get information about all the events which can increase their interest towards that specific domain.
- They can download previous year question papers which will give them idea of the question paper design and will prepare for exams accordingly.
- They can be able to select companies on their area of interest and domain based on the information provided.

Semester-6

File | C:/Users/pardh/Desktop/Student/text.html

Sastra University > Information Technology > Third Year > Semester-6

Software Enginering

This course will help the learner to design a real world project in a systematic manner and also assess the possible problems involved during System Design

[Textbook](#)

Cryptography

This course will help the learner to question the need for cryptographic and network security algorithms, apply security principles to system design. This course will also help the learner to identify and investigate network security threats.

[Textbook](#)

Cyber-Forensics

This course will help the learner to understand and use computer forensic technologies, systems, services and techniques of data backup & recovery.

[Textbook](#)

Data Warehousing

This course will help the learner to construct data warehouse and apply data mining techniques to uncover interesting patterns.

[Textbook](#)

Digital Signal Procesing

This course enables the learners to gain knowledge on discrete transforms and the design of FIR and IIR digital filters.

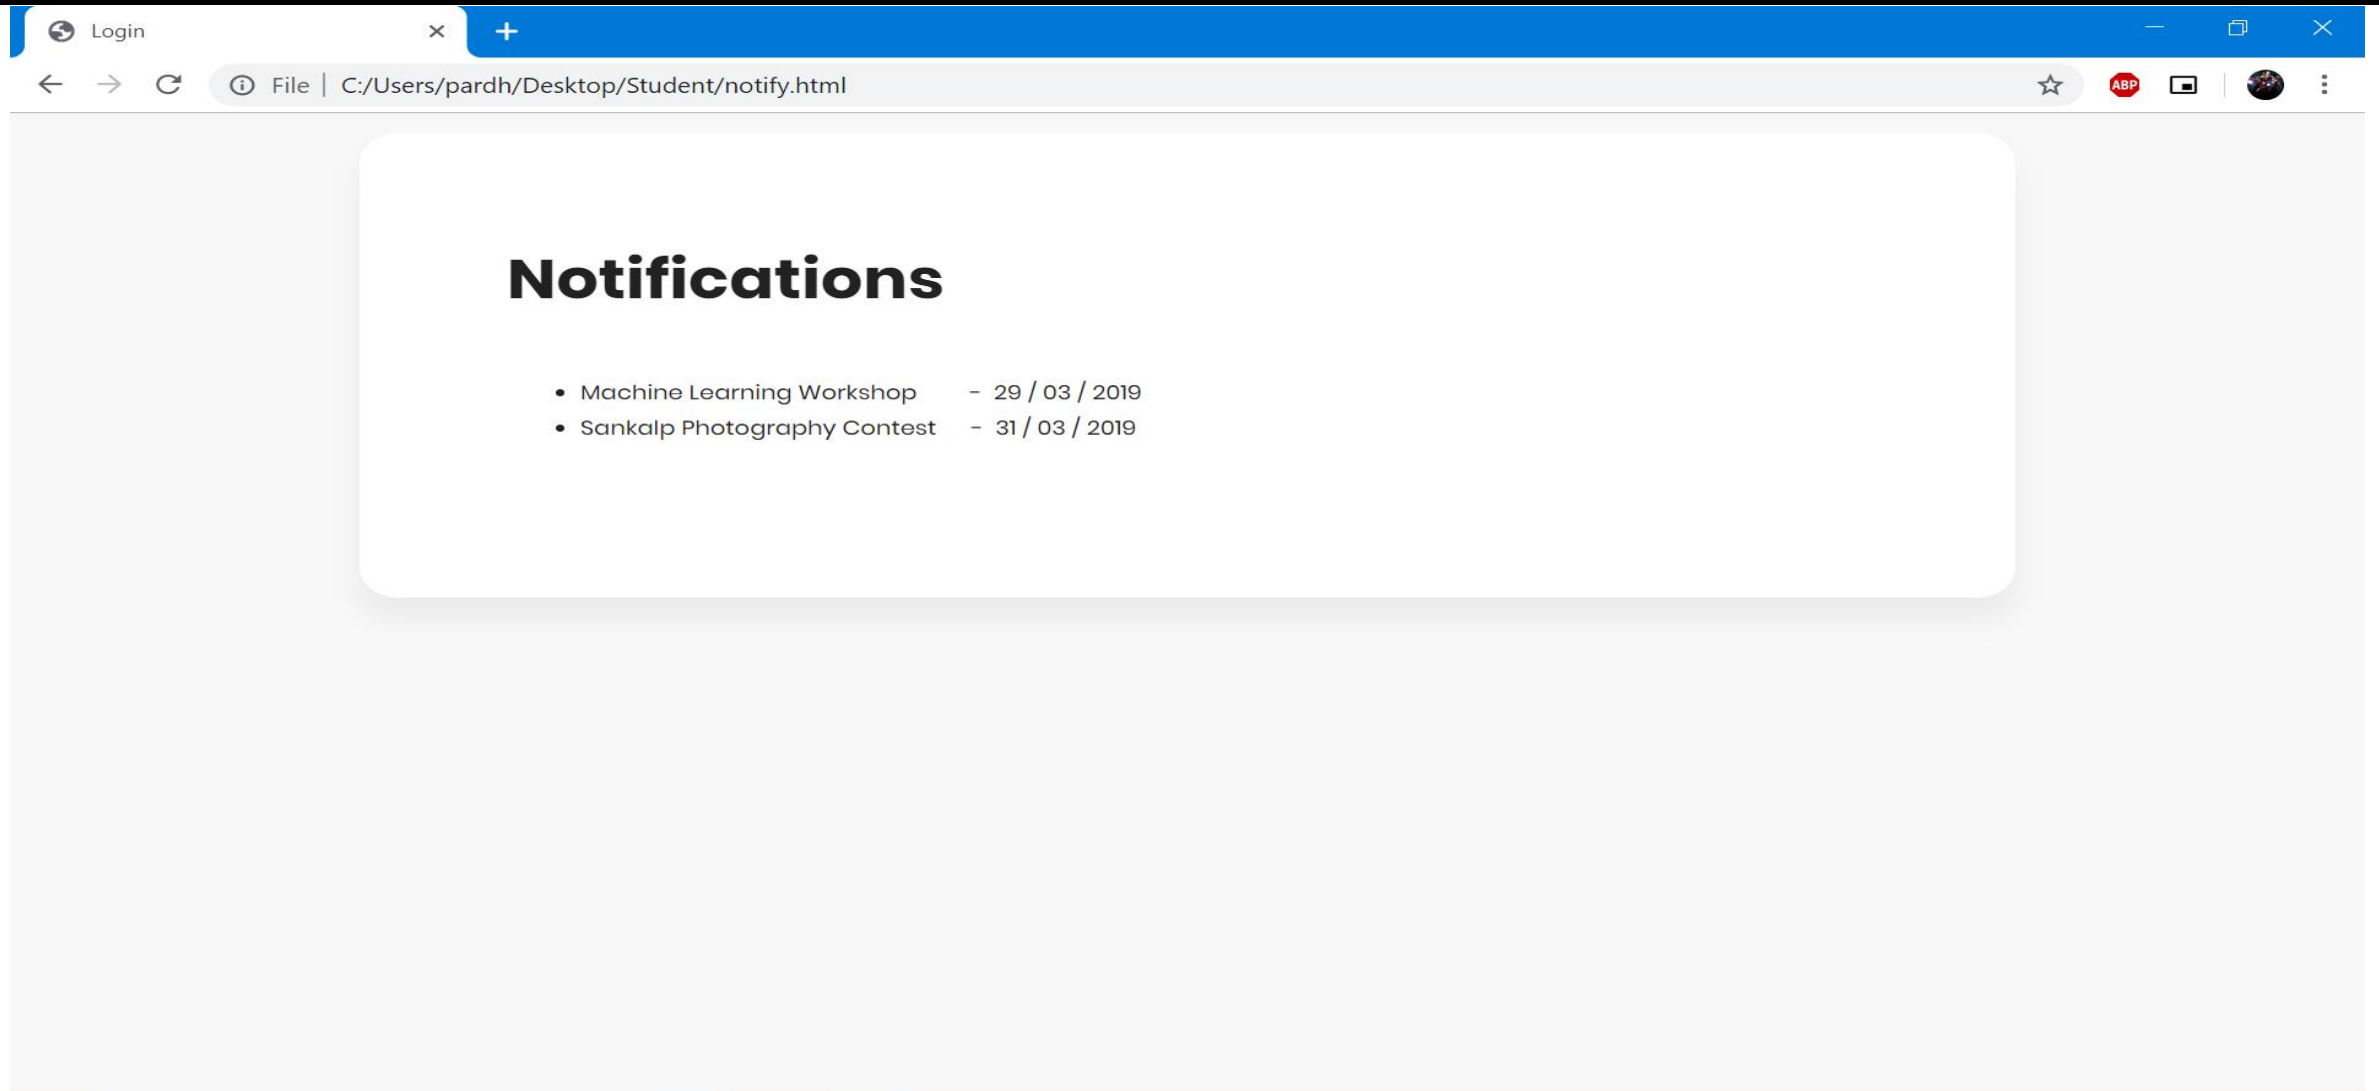

[Textbook](#)

Python Programming

This course will help the learner to develop Python programs for a given problem using programming constructs. It will also help the learner to develop web applications in Python using Django Web framework.

 Add user

 Remove selected users

(Revoke all active privileges from the users and delete them afterwards.)
☐ Drop the databases that have the same names as the users.

Go

 Note: phpMyAdmin gets the users' privileges directly from MySQL's privilege tables. The content of these tables may differ from the privileges the server uses, if they have been changed manually. In this case, you should [reload the privileges](#) before you continue.
